

BLOCK.CO
Don't Trust, Verify!

Powered by

UNIVERSITY
of NICOSIA

**The ONLY truly decentralized
solution to secure PDF documents
from fraud without intermediaries!**

Block.co transforms the way organizations leverage open source vPDF technology in the issuance, revocation, and validation of self-contained and self-verifiable documents.

Our Mission

Is to eliminate document fraud everywhere, by transforming the way institutions manage digital records.

Our Vision

Is to develop innovative solutions that address the needs of clients, while remaining at the forefront of technological developments in the sector.

About Block.co:

Block.co is a spin-off from the University of Nicosia (UNIC). Back in 2014, as part of its global blockchain adoption, UNIC was the first university to offer a Masters' degree in Digital Currencies, as well as accept bitcoin as payment for tuition fees. Additionally, UNIC was also the first institution globally to develop a solution which enabled it to issue academic certificates on the Blockchain.

The motivation behind this was to enable anyone independently and remotely, without the need of any intermediaries, to validate the authenticity of any issued certificate.

Block.co carries a team with a blend of skills consisting of Blockchain engineers, academics, and field experts to accommodate all technical and other requirements of any entity, wishing to register any type of document on the blockchain.

Combining the broad knowledge in blockchain technology, and the extensive and diverse industry experience of its management team, Block.co is a global player in the provision of solutions regarding blockchain secured digital documents. With the confidence in a product that has been successfully implemented and battletested for over four years by its creators, the University of Nicosia, Block.co can assist organizations from all sectors of the economy with business operations involving the issuance of any type of digital document.

Two-Fold Product:

Via its BaaS (Blockchain as a Service) platform, Block.co allows institutions to issue digital documents that are anchored to the blockchain, assuring immutability and security, by simply dragging and dropping a PDF file.

The BaaS platform also features:

- Issuance of unlimited file size documents
- Issuance in batches
- Documents issuance search functions
- The ability to include QR code validation and/or one-click verification link on the issued PDF documents
- API integration with existing legacy systems
- Multiple users/permission levels
- Pay-as-you-go subscription packages customized to your organizational needs, without having to handle the low-level technical challenges of blockchain systems
- An open-source validator that can be branded and placed on your site within minutes

The documents produced are 100% self-contained and self-verifiable, meaning they contain both the blockchain proof and data within the document, without the need to install additional software or apps for verification. This allows for an independent verification of the document's authenticity through the open-source validator, making the solution truly decentralized and timeless, ensuring vendor independence.

All content and personal data is stored off chain for maximum privacy, while the encrypted information that is stored on the blockchain, compliments the data privacy guidelines and empowers recipients with ownership of records. With its on-chain revocation process, expired or revoked documents leave a complete audit trail ensuring transparency and trust.

Advantages:

Easy to Use

Issue, revoke or set expiries on secure digital documents with a few clicks, using an intuitive Web interface.

Secure

Digital fingerprints of documents are stored on the most secure blockchain to date.

Immutable

Digital documents that are impossible to falsify.

Trust-less

Remove the need for intermediaries from the process.

Automated

Simple automated processes with no need for downloads.

Fast

Disseminate secure digital documents in a time-efficient manner.

Scalable

Issue thousands of secure documents in one click.

Cost-Efficient

Reduce paperwork and workload within your organization.

Future Proof

Self-contained documents and open-source validator make our solution timeless.

Empowering

Empower recipients with ownership of their documents.

Compliant

Compliance with all standardization efforts and data privacy laws.

Value-Adding

Drive your brand's awareness through the documents you share online.

Market Tested

Thoroughly tested, our technology is leveraging blockchain in a variety of industries world-wide.

No Vendor lock-in

Our solution is based on the principles of decentralization and open-source code, meaning you will never be locked into a specific vendor, wallet or platform.

Dedicated Support

We are committed to success and we are ready to assist you in every step.

Blockchain Agnostic

Choice of blockchain according to your needs.

Industries We Serve:

Education

- Matriculation, University and Academic Degrees
- Transcripts
- Professional Training Certificates
- Professional Qualification Diplomas

Legal

- Contracts & Contract Notarization, Non-Disclosure Agreements
- Registration Documents, Certificates of Ownership
- Testaments, Deeds, Wills
- Power Certificates of Attorney, Assignment Agreements
- Licensing Agreements, Technology Transfer Agreements
- Intellectual Property Rights

Maritime & Shipping

- Cargo Record Certificates
- Compliance & Safety Management Certificates
- Ship Crew Certificates of Competence
- Cargo Ship Safety Certificate

Public Sector

- Local Authorities
- Police
- Ministry of Transport
- Registrar of Companies
- Education Ministry

Accounting & Audit

- Invoices
- Financial Statements
- Pay Slips
- Emolument Certificates

Publications & Intellectual Property Rights

- Evidence of Creatorship and Provenance Authentication
- Registering & Validating Intellectual Property Rights
- Providing Evidence of Genuine and/or First Use in Trade and Commerce
- Trade Secrets, Source Code, Methods, Prototypes, Formulas, Lab Results, Specifications, Recipes
- Technology Transfer Agreements

Banking & Financial Services

- Bank Reference Letters
- Corporate loan applications
- Security Files
- Compliance Services

CURIOUS ABOUT HOW WE CAN HELP YOUR BUSINESS?

Partner with US:

Content Management System Companies

Win clients over by offering them the ability to easily create and issue verifiable, tamper-proof digital documents.

Software Companies

Upgrade your existing products and give peace of mind to your clients for the security of their digital documents with cryptographic blockchain technology.

Document Management System Companies

Gain valuable market-share and integrate with our API to offer your clients cutting edge technology with the ability to eliminate fraud within their digital document processes.

Education Platforms

Leverage our expertise to streamline workflows and ways of verifying authentic or fraudulent certificates within and outside of your organization.

Secure Printing Solution Providers

Remove the hassle of expensive security features or tedious verification processes for your clients.
